About Me

I'm a Telecommunications Engineer currently working as a Cloud Automation Engineer with a strong focus on DevOps practices. I began my career managing virtualization platforms (VMware, Hyper-V), transitioned into cloud administration with Azure and AWS, and eventually specialized in automation — where I discovered my true passion: coding and optimizing infrastructure. I have hands-on experience with Go, Python, PowerShell, and Terraform, and I use these tools to automate cloud deployments, CI/CD pipelines, and infrastructure management. I'm passionate about building reliable, scalable systems and continuously improving developer workflows. I enjoy working in collaborative environments and learning from other engineers. Currently, I'm also expanding my skills in web development and data science to bring a broader perspective to problem-solving in DevOps.

Skills

Education

Bachelor of Telecommunications Engineer

Universidad Compensar

2015-02-01 - 2021-12-01

GPA: 4.0

Associate of Telecommunications Network Management

Universidad Compensar

2018-01-01 - 2020-12-01

GPA: 4.0

Languages

English Advanced

Spanish Native

Experience

Cloud Automation Engineer

2025-03-18 - CURRENT

Michael Page

Design and deployment of cloud infrastructure, service configuration, and project support across Azure and AWS environments. Incident and problem management, change control execution, and capacity planning. Monitoring and availability strategy implementation, cost control of cloud platforms, and continuous improvement planning. Cloud automation using tools such as Python, Go, Terraform, and Azure DevOps.

Cloud Data and Automation Engineer

iFX Networks

2022-01-18 - 2025-03-18

Design and implement data pipelines to acquire and transform information, enabling decision-making support. Apply data analysis techniques to identify patterns and trends, and communicate findings through effective visualizations. Develop automated algorithms and procedures to integrate data from multiple sources and optimize critical business processes. Identify opportunities to collect new data and improve data quality and reliability.

Platform Administrator

2022-01-18 - 2025-03-18

A Toda Hora S.A.

Managed cloud infrastructure in AWS and Azure. Maintained and updated applications and microservices running on EKS and AKS. Automated processes using AWS CLI and Azure CLI through Azure DevOps pipelines. Deployed and updated infrastructure using Infrastructure as Code (IaC) with Terraform.
